

# Robot Controlled Spinning Work Cells

**DANGER**  
THIS MACHINE  
STARTS AND STOPS  
AUTOMATICALLY

**CAUTION**  
ONLY AUTHORIZED  
PERSONNEL PERMITTED  
TO OPERATE  
THIS MACHINE

**CAUTION**  
EAR AND EYE  
PROTECTION  
REQUIRED

# Robotic Manufacturing

- Machine tending refers to overseeing a machine while it performs a job, as well as the process of feeding parts in and out. Industrial robots are well-suited for this type of work.
- They tend metal forming machines for processes like, spinning, flow forming, hot spinning, etc.
- Using industrial robots for machine tending tasks is a great way to add automation to a production line while decreasing part cycle time, saving customers money while ramping up productivity.
- MJC can provide customers with turn key solutions for your fully automated metal forming workcell.
